

Our services include:

- ▶ Access systems
- ▶ Insulation
- ▶ Specialist coatings & fireproofing
- ▶ Engineering services
- ▶ Oil, liquids and gas bulk storage
- ▶ Refractory linings
- ▶ Environmental services
- ▶ Design and engineering
- ▶ Asset integrity

2015 Hazard awareness

Cape is continuously striving to develop innovative safety campaigns to raise awareness of health and safety. When people are working in the same environment for long periods of time their perception of risk can be lowered, sometimes losing awareness of the hazards they face every day. In order to counter this Cape has created a novel and engaging way to present safety training focussing on hazard awareness and assessment.

Using virtual reality headsets Cape has created a 360 degree interactive virtual reality simulation of an industrial working environment whereby the user experiences a range of hazardous 'real life' situations whilst remaining in the safety of the training room.

The technology enables training to be held at any site, both on and offshore to maximise coverage, with over 2,000 employees trained to date. The feedback from users has been universally positive with the learning delivered in a realistic, hard hitting way that is different to the normal communication and training methods.

Cape continues to revolutionise its health and safety training. The use of 360 degree imagery of a real working environment presented using immersive virtual reality technology is having a real impact on employees throughout the organisation.
